Step 5: Step 5: In this page after the company provide the login id and password they can able to login and add their products

Step 6:New order should come here and the shop keeper will accept or reject if he accept then notification will send to all the delivery boy nearby then who accept the order 1st he his details will come there and he can arrive and pick up the order by saying the otp.The timing the shop keeper will set when they click the active order then it will go to next step 7 and if the client click active then everyone can able to see that shop was open and if he click inactive then customer can see that they are not active

Step&: This is Active order page if the customer order then that will come to this page and if they click all the new order or preparing or ready etc all will come and if they click the preparing then preparing order should status are uploaded by the shopkeeper make an edit option also id number name address phone number everything should be there and the timer should run that it was ready if preparing done if they click that button order ready it will go to next stage timing should be determined by the shopkeeper. Timing should be there in the button. This is for hotel

Step 9 :This is preparing page and the status should in the box and f they already paid the amount that also there should be mentioned and the timing will run on button and the blue color will reduce according to the time reducing and there is an otp of delivery boy who accept the order will be there and his details and his arriving time also should be there.

Step 10:This Page is for the medical shop the user will send the details as photo or pdf and the medical shop owner can able to see this by clicking view attachment. They can accept if they have the medicine then it will go to next step.
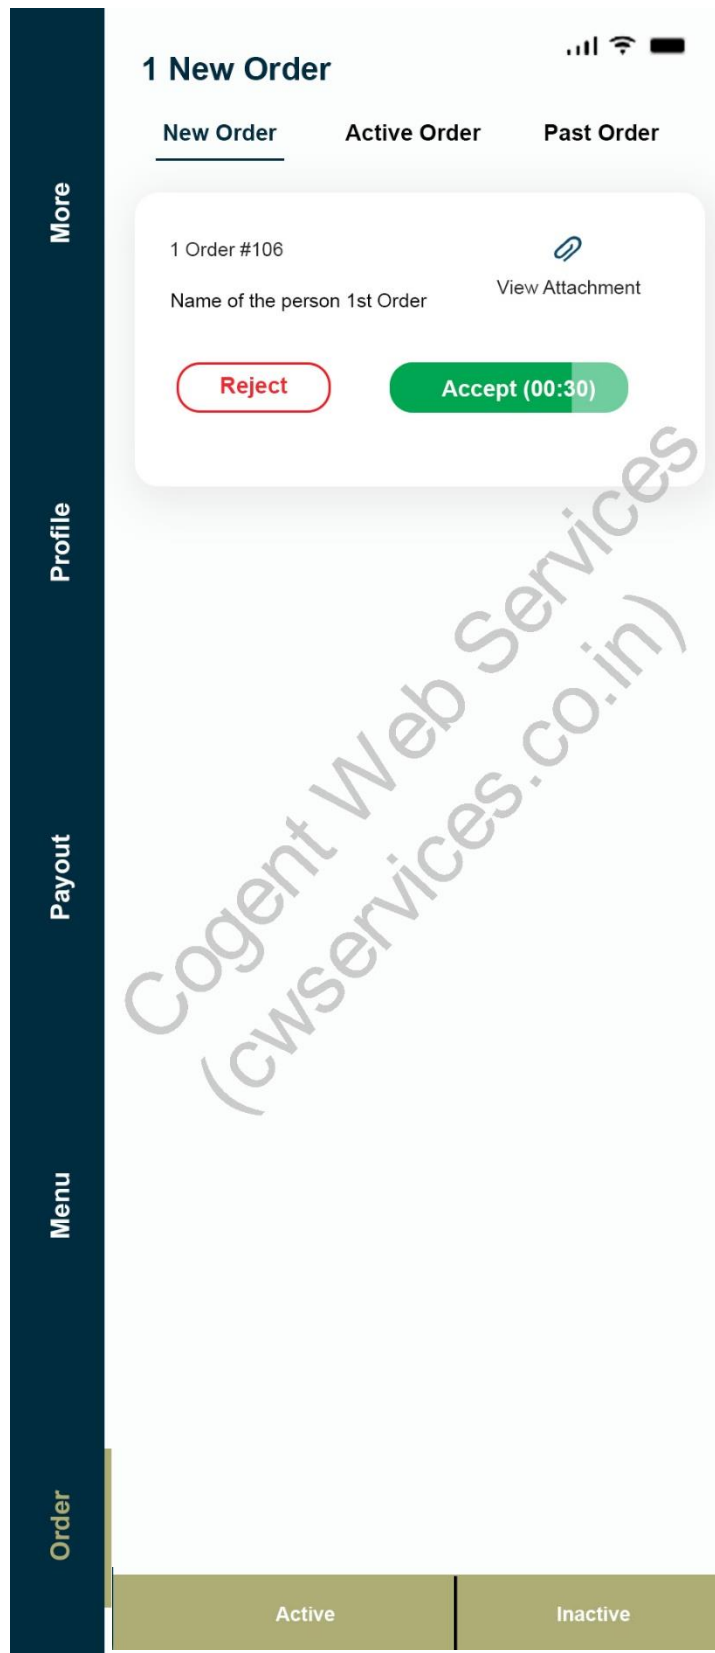

Step 11: After they accept the order they will fill the price of the medicine they send and the user will get the notification in their app if they are comfortable with that amount they will accept or they will send request to reduce the amount that notification also they get in this page and then shopkeeper will view and modify the price.
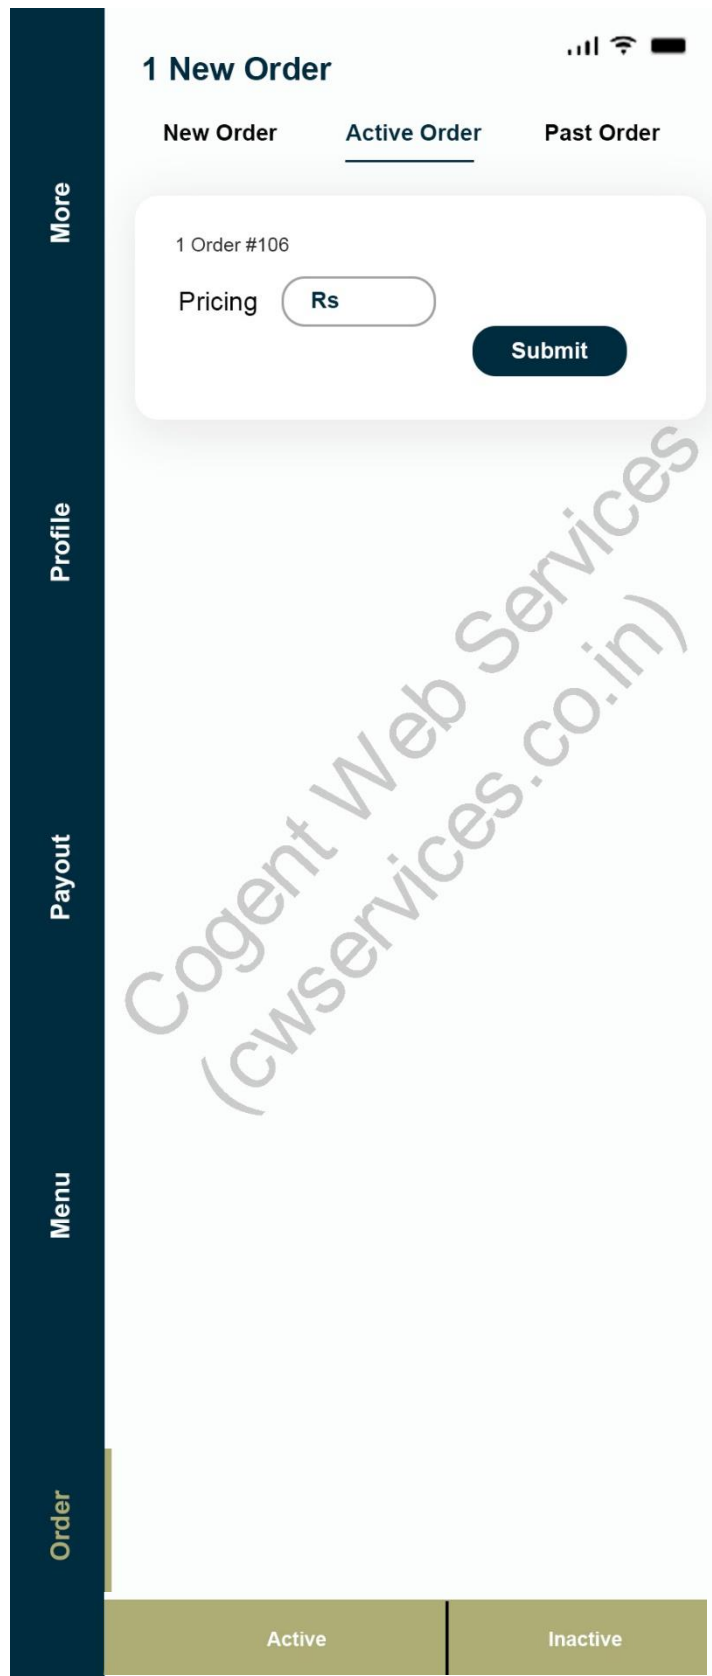

Step 12: If they click the modify pricing then they can enter the price and submit the user will e the notification

Step13:After they accept the order then this page will come and shopkeeper will update the status
